Steps to Connect Gajshield VPN Client with Gajshield UPTM:

Scenario: I am connecting my Laptop using Dynamic ISP with one of Gajshield UPTM connected to Static/Public IP. Cases:

The Lan segment I which to access is 192.168.2.0/24

I am not behind a Natting Machine.

The IP I require after establishing the connection is 192.168.2.146

1. Setting Up Gajshield UPTM VPN Configuration:

a. Creating a VPN Tunnel Using Default Policies:

Here is the screenshot of Vpn Tunnel:

Note: The Tunnel is using Default IPsec Policies defined in GajShield UPTM.

Here:

mywanrouter is the WAN ISPs default gateway IP address. ChiragVPNIP is the vpn client IP address (The ip address i want after VPN establishing VPN) .. in this case it is 192.168.2.146

The VPN Tunnel in Detail: Note the vpn type is Net to Net

b. Creating Rules for Connection:

The Next step is to add a rule for the connection.

Here is the rule i have entered:

3	WAN to WAN	any	IPsec-VPN	fwip- WAN	accept	yes	active	default	Always On	no	none	Ґ₫ѿ	
---	---------------	-----	-----------	--------------	--------	-----	--------	---------	--------------	----	------	-----	--

IMP Points: Direction: WAN to WAN SRC: any (since the client is using dynamic IP) Serv: IPsec-VPN

You are done with the firewall for the time being, restart VPN service.

2. Setting Up Gajshield VPN Client:

(Read this document or watch how to configure the vpn here

A. Phase 1 Configuration

a. Right click on Configuration and select New Phase 1 from the popup-menu or click on the VPN Configuration Menu bar and select New Phase 1

b. Configure the newly opened Phase 1 as per the requirement, for eg: Here my Configuration

screen;

GajShield VPN Client	
<u>File VPN Configuration View</u>	<u>T</u> ools <u>?</u>
GAJ SH Security S	IIELD Bimplified IPSEC VPN CLIENT
🔑 Console	Phase 1 (Authentication)
Parameters	Name Gateway1
😂 Connections	Interface Any
⊡긎 Configuration □ ္ Gateway1	Remote Gateway 59.163.43.149
Gateway2	Preshared Key Confirm: X*********************************
	C Certificate Certificates Import
	IKE Encryption 3DES P1 Advanced
	Authentication MD5
	Key Group DH1536
	Save & Apply
VPN ready	Tunnel: 🥑

Note:

The Key Group should be set to DH1536 for DH group 5 in our firewall (which is used in the default policy)

Click on P1 Advanced and select Nat-T to Automatic. (Advanced Users: Please read Setting up advanced Gajshield VPN Tunnels using Xauth and Nat-T manual for more information on these settings)

B. Phase 2 Configurations:

a. Right click on Phase 1 configuration and select Add Phase 2 or select Add Phase 2 from VPN Configuration Menu bar(keep the Phase 1 selected).

b. Configure Phase2 as per the requirements, for eg; here is my Phase 2

GajShield VPN Client	
<u>File VPN Configuration View</u>	<u>T</u> ools <u>?</u>
GAJ SH Security S	HELD Simplified IPSEC VPN CLIENT
💫 Console	Phase 2 (IPSec Configuration)
🙀 Parameters	Name Tunnel1
😂 Connections	VPN Client address 192 . 168 . 2 . 146
Configuration	Address type Subnet address Remote LAN address 192 . 168 . 2 . 0 Subnet Mask 255 . 255 . 255 . 0 ESP Encryption 3DES Authentication MD5 Mode Tunnel Scripts
	PFS Group DH1536 Open Tunnel
	Save & Apply
VPN ready	Tunnel: 🥑

Note:

Enable PFS Group and set it to DH1536.

The VPN Client address is the address you wish to take after the connection is established. (i.e your machines ip address once the connection is established. In our scenario it is 192.168.2.146) Remote Lan address is the address of the remote location (in this case remote location is the Gajshield Firewall) since I am interested in accessing the entire LAN, I am adding the entire LAN subnet.

Click on 'Save & Apply' button and Click Open Tunnel.

3. Giving Privileges to your Newly Connected VPN Users

a. Reserving the VPN Users IP:

Goto VPN->IPsec->Reserved IPs tab and add the user ip (i.e 192.168.2.146 in this scenario)

b. Adding Rules granting the new VPN user access. (Warning!! Do not add generic rules which may compromise the security of your network, add specific rules .The Rules mentioned in the documentation are only for illustration purposes and would change as per the requirements.)

I added this rule to grant me entire LAN access.

4	Any to LAN	fwnet- LAN	MyVpnServ	fwnet- LAN	accept	yes	active	default	Always On	no	none	d di a
---	---------------	---------------	-----------	---------------	--------	-----	--------	---------	--------------	----	------	--------

Note: Very Important!! Please Note the direction of the Rule... The direction of the rules opened for IPsec vpn users must be strictly Any to LAN
