How to configure CMS on your firewall

In this document we will guide you through the configuration of CMS on your firewall.

1. First go to Definitions -> Hosts. The following screen appears

Hosts	Country Groups FQDN hosts	Host Range				
	Host ID ↓↑	Host IP ↓↑	Netmask ↓↑	IP Version ↓↑	Status ↓↑	Tasks
-	GAJSHIELD	182.76.189.36	255.255.255.255	IPv4	Active	\$
-	fwip-LAN	192.168.2.127	255.255.255.255	IPv4	Active	\$
Delete						

2. Click on $\textcircled{\bullet}$ icon. 2. The following screen appears

Hosts	Country Groups	FQDN hosts	Host Range			
				Add H	ost	
Host ID					cmsserver	
Host IP					192.168.2.248	
Save	Cancel					

Specify the Host ID and Host IP

HOST ID: A name given to the IP address defined below.

This name does not have to be the hostname of the IP address given. It can be any name which can be associated with the IP address

HOST IP: IP address (IPv4 / IPv6) of the host defined above.

Hosts	Country Group	FQDN host	Host Range
Host: cmss	erver added successfu	ly.	

3. Now go to Management -> CMS and Configure CMS Server by selecting the appropriate CMS Server from the drop-down list

CMS Configure				
Add CMS Server				
CMS Server Host	cmsserver •			
Save Cancel				

Congratulations, you have successfully configured CMS serveron your firewall.

CMS Configure	
	Status
CMS Server: cmsserver added successfully.
