

How to set up guest user on the firewall and client side

How to set up guest user on the firewall and client side

Once you have set up the SMS gateway in Management -> Settings -> SMS Gateway, you'll have to configure Guest user settings by going to Browsing -> Guest Users -> Guest User Settings.

The screenshot shows the 'Add Guest User Settings' form. The 'SMS Gateway' dropdown menu is open, showing 'Please Select' as the only option. The form includes fields for Login ID, Group (testgroup), Enable Guest User Registration, User Mobile Number as Login ID, Validity, Enable Captcha, Disclaimer (Optional), and Delete Users on Expiry. A 'Save' button is at the bottom left.

Your configured SMS gateway will appear in the drop-down option in the Group field as shown below

The screenshot shows the 'Add Guest User Settings' form. The 'SMS Gateway' dropdown menu is open, showing 'testsmgateway' as the selected option. The form includes fields for Login ID, Group (testgroup), Enable Guest User Registration (checked), User Mobile Number as Login ID, Validity, Enable Captcha, Disclaimer (Optional), and Delete Users on Expiry. A 'Save' button is at the bottom left.

Once you have set the specified SMS gateway, all the guest users will be sent alerts only using this SMS gateway.

Client end configuration

When new guest user wants to start browsing for the first time, he'll have to register by clicking on the "New User" option as shown below.

GajShield Infotech India Pvt. Ltd

Username

Password

OTP
