

GAJ OS Bulwark 5.0

Release Notes

Build V5.0 dc/nu Series | July 2021

[Click Here For More Info](#)

GAJSHIELD

New Features:

1. VShield is a method of creating Gajshield NGFW virtual units that function as multiple independent units. VShield can provide separate independent firewalls for multiple units of same organization or different organizations.
2. nuVPN is an extremely simple yet fast and modern VPN. It is faster, simpler, leaner than IPSec. It provides considerably more performance than other VPN alternatives. It is designed as a general purpose VPN that is easy to configure.
3. Firewall Admin can be created using LDAP, Active Directory, Radius and Tacacs users directly.
4. Option for configuring remote VPN Logs.
5. Ability to use Wireless USB Dongles as ISP interfaces.

Bug Fixes:

1. Issue while changing Cloud Interface Name.
2. Prefix issue in IP Tunnels Configuration.
