GAJSHIELD

New Features :

Manage Admins: Password Policy will apply while creating admin.

VPN: Option to Restart VPN Service if it is already running.

Factory Reset: Proper warning message displayed to user, reminding them that Factory Resetting the firewall will delete all backup files as well. Warning message reminds the user to download backup files before factory resetting if required.

Users: In the new firmware, Users and User groups created in the firewall will show their types as well, The admin will be able to recognize from where the User/User group was added to the firewall ie. From LDAP, AD or created locally on the firewall.

Rules: For the ease of configuration the ability to "on-the-fly" create Definition objects and various policies like DLP, URL Filters etc. directly from Firewall Rules Tab has been added. The admin can now add useful configurations directly from the Firewall Rules Tab.

WAN Failover: Added 2 extra Target IPs in WAN Failover increasing the total to 5.

User Interface:

- The ability to customize number of records shown per page on the firewall. User can set different values for different tabs based on preference.
- Back Button to directly go back from Add/Edit page without having to click on Tab Heading.
- Returning from edit/delete operation will keep search results and/or page number persistent.
