[Click Here For More Info](#)

GAJSHIELD

New Features:

1. ATP (Advanced Threat Protection) is integrated in firmware.
2. SSL VPN for allowing remote users to access enterprise network.
3. Notifications for Reminding Service Start/Restart Actions on making changes to configuration.
4. Bridge rules, Rules created for interfaces will apply to bridge created using those interfaces automatically.
5. Option to Bypass UserSense using MAC Address (IP and MAC can be used together or individually).
6. Firmware Upgrade on firewalls with HA Service active will not work until HA Service is stopped.
7. Option to enable Auto Update for Patches.

Bug Fixes:

1. Fixed an issue where UserSense login allowed users to submit form multiple times.
2. Fixed issue with charts generated in Top Reports section.
